

Height adjustment of the driver's seat

By equipment type

- This operation is repeated a driver's seat right next to the lever.
- Pulling the lever will move forward with the entire sheet is increased.
 - When pushing down the lever, will move to the rear along with the entire sheet is lowered.

3

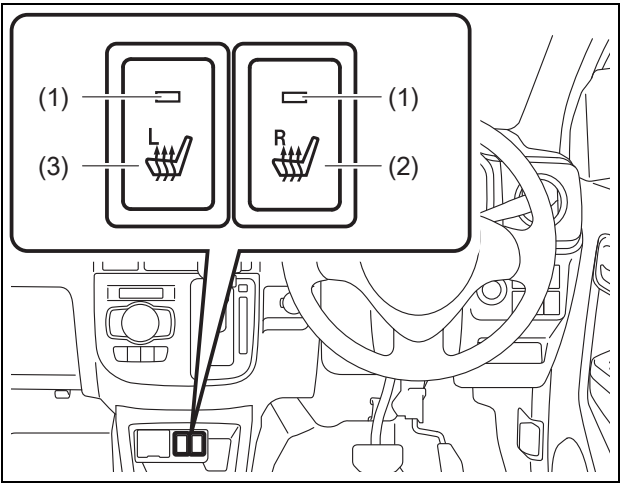

74P30230

- Sheet of the above diagram is a typical example. It depends on the car of the type.

Seat heater switch

By equipment type

- You can Mel that per the seat surface with a heater located in the seat.
- Engine switch ON Scan at the time of the
When you press the switch, the heater is activated, indicator light in the switch (1) lights up. Press it again to stop the heater.
 - Once you become a seat of your favorite temperature, please stop the heater.

74P30240

(2) driver's seat heater switch (3) the front passenger's seat heater switch

- Illustration of the above diagram is a typical example. The number of switches depending on the type of your car is different from or to.

⚠ 注意

- If you use a long heater and the camera returns to the cause of the low - temperature burns (such as blisters).
- Such as a blanket or cushion, please do not put on a sheet having a high thermal insulation. It will be the cause of overheating.

注記

- Or place heavy luggage on top of the sheet, such as a needle or a nail or stab to the sheet, such as please.
- When you clean the sheet, Ben Jin, please do not use the cleaning liquid containing gasoline and alcohol of any solvent. The sheet surface and the heater will cause damage.
→ 6-4 page (interior of care)
- When spilled, such as water or juice, soft wiping with a cloth or the like, do you use from sufficiently dry.
- Because of the lead battery protection, it should be used when you are suffering from the engine.

⚠ アドバイス

Heater does not automatically stop. It will continue to operate and not turn off the switch.

Rear seat

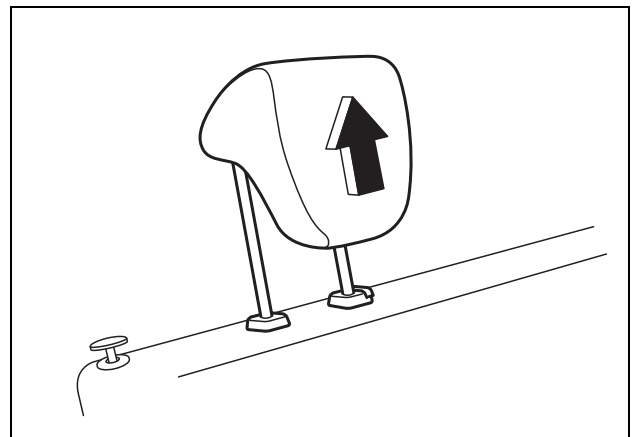

Disconnect - Mounting preparative and height adjustment of the headrest

By equipment type

■ Position at the time of use

When used, lifting by hand headrest Chiage, and firmly fixed.

while using it

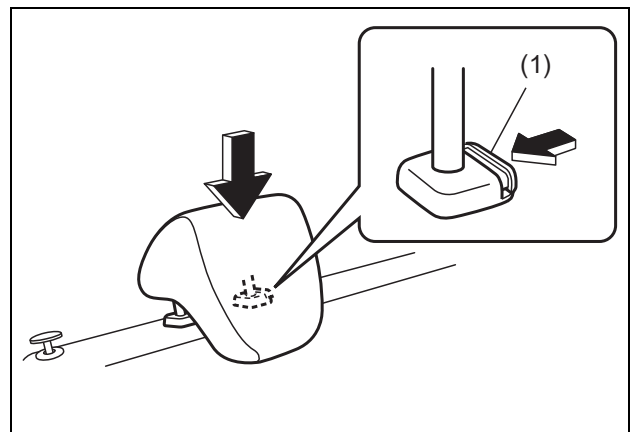

64L3073G

- The rear seat of the above diagram is a typical example. It depends on the car of the type.

■ Position at the time of storage

When storing, lower and press the headrest while holding down the lock button (1) to the bottom.

During storage

64L3074G

■ Removing

Press and hold the lock button (1) arguments you can unplug.

While removing the headrest, please do not put the person in the rear seat. (Except when the child seat fixed)

3

Headrest you removed in such children for the seat fixed, please do not leave in the room. For example, when multiplied by the sudden braking hit, such as the passenger and things and can cause lead to unexpected accident.

■ Attaching

The longitudinal direction of the headrest do not confuse so, insertion to the position to be fixed, and the adjustment of the height.

• Headrest, please firmly fixed. Also, please do not attached to reverse around the headrest. Header dressed is not the original effect exhibit can.

If you install a headrest to reverse back and forth, it can not be the height adjustment of the headrest.

- When attaching the child seat, since the children seat are prevented from striking the headless bets, please remove or adjust the highest position within the range that can secure the headless strike. In a state in which the headrest hits can cause damage, such is securely fixed your child (s) for the seat, the child, for example, when the collision suffer serious injury.

Backrest defeat of the way

When the defeat of the back to the front, you example luggage compartment is widely used.

Please do not put a person on top of the defeated backrest and luggage compartment. Brake and acceleration, such as when the collision, there is a risk of thrown out is by injuries.

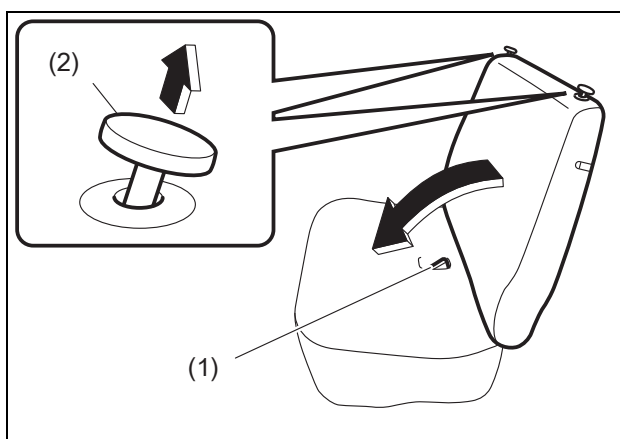

To move the backrest, Dari do Hasa the hands and feet, please be careful not to or against the body.

■ Passenger type vehicles

Defeat the way

- 1 A headrest (equipped by type) to adjust to the number one position lower.
- 2 Lay the seat belt buckle (1) Previous person.
- 3 Back shoulder portion of the locking knob (2) to release the pulling up the lock, tilt the seat back forward.
 - If the rear seat of the headrest (by type instrumentation Bei) hits the front seat, please move the front seat forward.
 - Lock knob must be Ru pulled up to the left and right both.

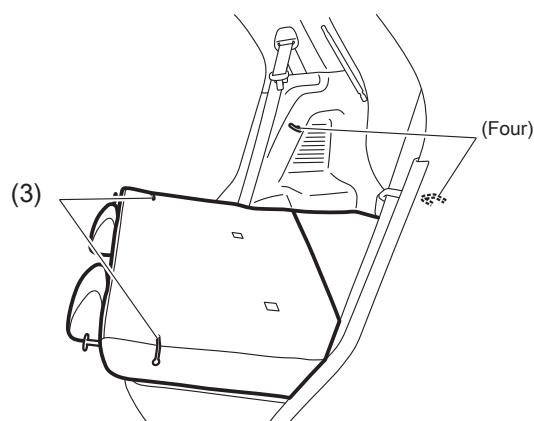

74P30250

- The rear seat of the above diagram is a typical example. It depends on the car of the type.

注意

- When the lock knob is pulled once, it is or will remain unlocked. By, for example, defeated straining cause again the backrest once before, please sure that the backrest is securely fixed.
- Please do not put your fingers on the back the back of the lock parts (3). There is a risk of injury.
- The luggage of a fixed, please do not use the backrest back of the lock parts and backrest locking hook (4). Also, please do not let wear with foreign matter such as sand to lock parts and hooks. Lock parts and bent or damaged or hook, Otherwise, there is the backrest can not be fixed.

74P30260

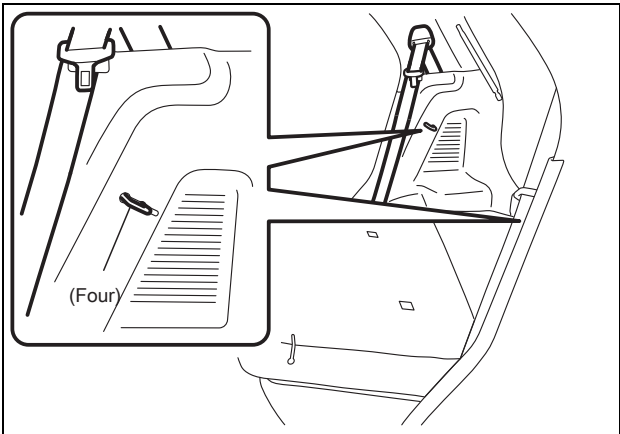

- The rear seat of the above diagram is a typical example. It depends on the car of the type.

Cause the way

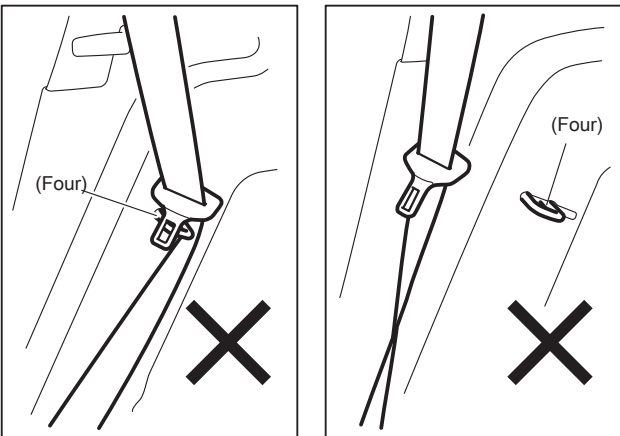

1 Seat belt, make sure that it is in the next state.

- In front the hands of the backrest fixing hooks (4) (the belt causes the sheet in a state in which the back side of the hook, the seat belt can not be used)
- Not applied to the hooks (4)
- There is no twist in the belt

3

74P30270

74P30280

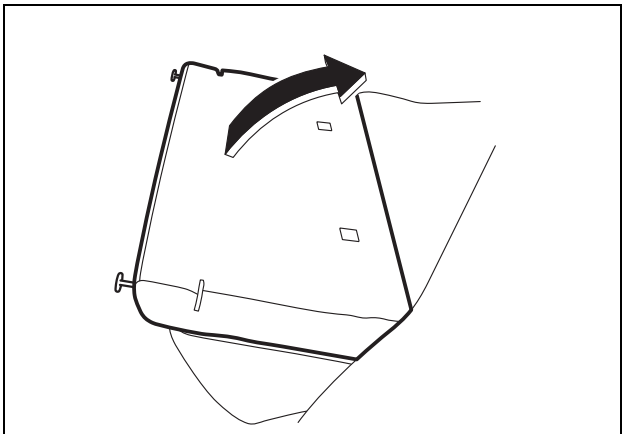

警告

As the belt or there is Gillet or, I have hanging on a hook, there is a possibility that the hurt is caught to the hook when you Oko sheet.

2

Causing the seat back, and push back direction of the car to a position that is fixed.

74P30290

- The rear seat of the above diagram is a typical example. It depends on the car of the type.

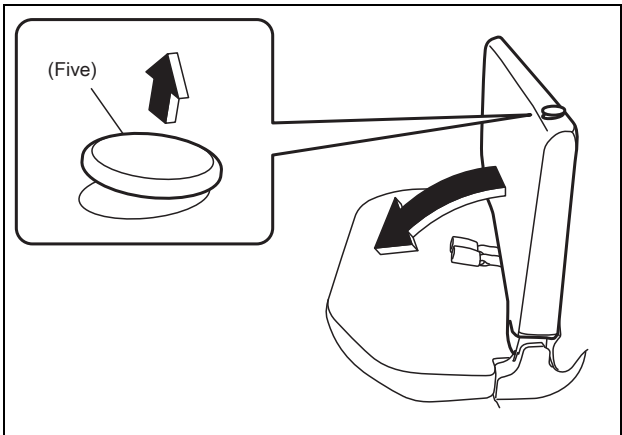

注意

Shaking the backrest back and forth, please ensure that it is securely fixed. If fixed is uncertain, fell to the sudden backrest is before while driving, there is a Re emesis unexpected injury.

Commercial type vehicles

Defeat the way

Backrest shoulder the left side of the lock knob (5) to release the pulling up the lock, and then push it down to the front of the backrest.

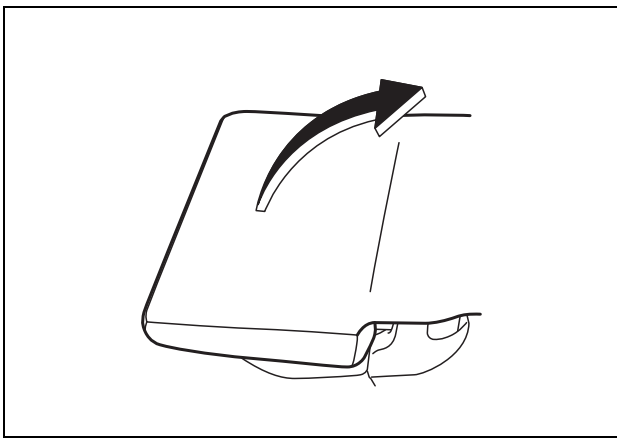

74P30780

⚠ 注意

When the lock knob is pulled once, it will remain lock is released. Back even if such cause again defeated before the sauce once, Please make sure the backrest is securely fixed.

Cause the way

Causing the seat back, and push back direction of the car to a position that is fixed.

64L30440

⚠ 注意

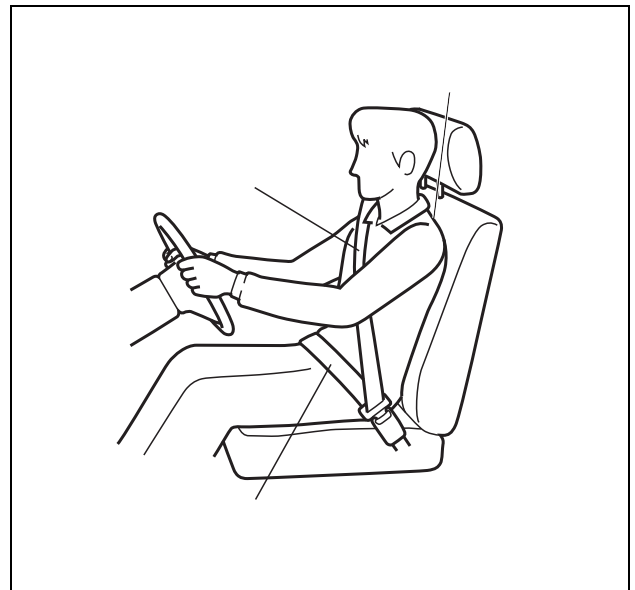

Shaking the backrest back and forth, please ensure that it is securely fixed. If fixed is uncertain, fell to the sudden backrest is before while driving, there is a Re emesis unexpected injury.

The seat belt

Sit in the seat in the correct position, if you do not wear a properly seat belt, seatbelt can not exert the original effect. When you wear a seat belt, please note the following of this.

- Adjust the seat to the correct position, you sit deep causing the upper body.
- You wear so that the belt is not twisted.
- Waist belt is subjected to as low as possible position of the waist.
- Shoulder belt is put in the center of the neck and shoulder.
- Make sure that the belt is not twisted, remove the slack.

→ 3-28 page (correct driving position)

70K216

⚠ 警告

- Do not tilt more than necessary the backrest. In addition, Do not slack the belt, such as clothespins and clips. The seat belt can not be exhibited the original effect.
- Please let me wear a seat belt in the passenger everyone in the front passenger seat and the rear seat.

Also wear a seat belt children

→ 2-6 page (when you put the child)

Please do not Asobase in the seat belt the children.
When you are playing with Runado winding a belt on the body, there is a danger of being choked soil serious injury or be. Please to disconnect the belt with a pair of scissors in the unlikely event of.

80J028

If you are pregnant or disease

- If you are pregnant, please wear a seat belt even those who have the disease. However, because there is Ruosore is locally strong pressure at the time of the collision, please review the notes and consult a physician.
- If you are pregnant, you only do a waist belt abdominal avoided only in the lowest possible position of the lumbar region. Shoulder belt, please by sea urchin wear applied to the chest to avoid the abdomen from the center of the neck and shoulder.

80J075

Seat belt warning buzzer

The passenger side is equipped by type

It is a buzzer in order to prevent the seat belt wear forget the front seat.

- Do you have to start traveling over the engine, and the first to not wearing a seat belt when the vehicle speed is equal to or greater than about 15 km / h, when the seat belt warning lamp in the meter is switched to flashing from the lighting both the seat belt warning buzzer will sound to the cross-sectional-sustaining.

→ 3-73 page (seat belt warning lamp)

⚠️ アドバイス

- If you wear a belt, warning light will go off. In addition, when the warning buzzer is sounding, also it will stop the buzzer.
- Warning buzzer is also not wearing a belt, it Ri Thomas after that continued to sound for about 95 seconds. However, the warning lamp is switched on **lit from blinking** **While Tsu En Jeans switch does** not turn off until you, or (OFF). **LOCK**
- In the case of the passenger side, it does not sound a buzzer when it is not divided be a passenger in the front passenger seat. However, there are times when the sound and have put the luggage in the passenger seat.
- Warning light is the driver's seat side and the passenger's side also used.

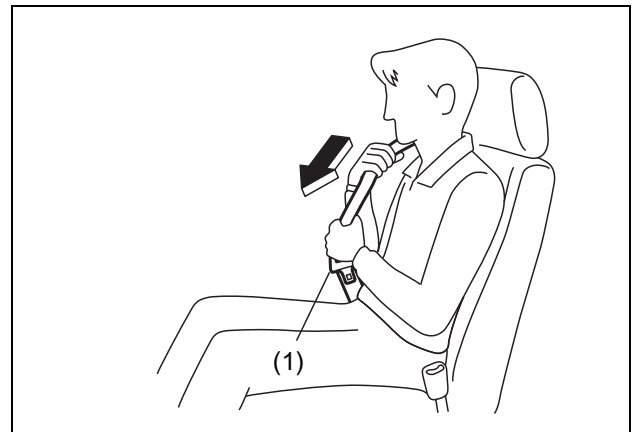

Adjusting the length of the seat belt

Seat belt, does not or need to be adjusted in length. Belt is Shin contraction according to the movement of the body, when subjected to a strong shock is automatically belt is locked to secure the body.

How to wear a seat belt

■ How to wear

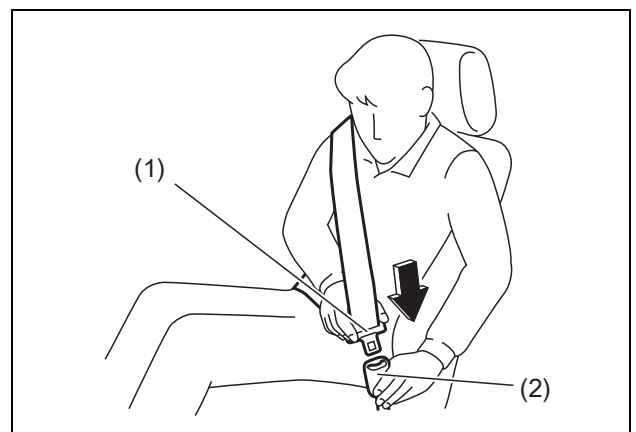

- Grasp the seat belts with the tongue plate (1), issue-out slowly pull the belt. It takes a twist of the belt.

⚠️ アドバイス

Belt Itoki is a drawn out have been locked, pull it out again loosen once. If you do not pull out still, loosen from pulling strongly once belt, sure to pull out slowly again.

- Together in such a way that straight to the tongue plate (1) to the insertion port of the buckle (2), and then insert firmly until it clicks into place.

3

The waist belt, and subjected to the lowest possible position of the waist.

Four

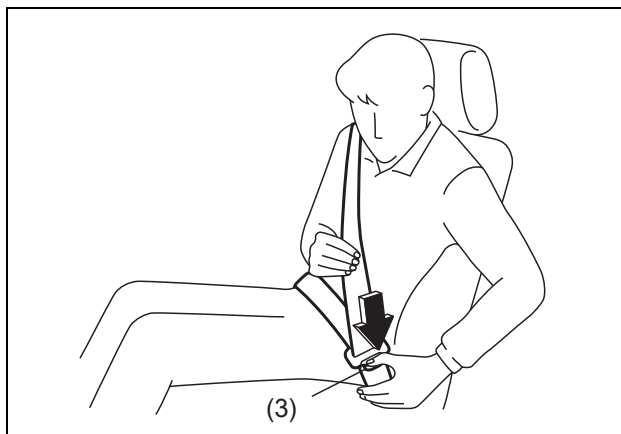

The shoulder belt, put in the center of the neck and shoulder.

Five

Make sure that the belt is not twisted, remove the slack.

■ When you disconnect the

Press the buckle of the button (3). Because you Modosarema seat belt is automatically wound, accompanied by a hand on the belt and the tongue plate, please return slowly.

80J1328

アドバイス

When the belt is twisted, it may not be taken up when the outside of the belt. Please make sure that the slack is wound also etc. without the belt.

To wear a seat belt properly

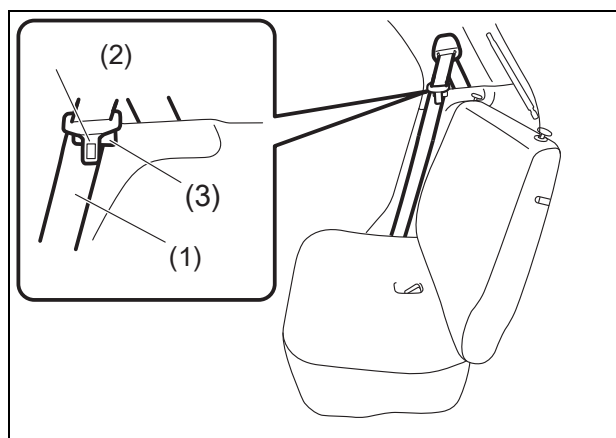

- When Ru twist and Tarumigaa to the seat belt, there is a risk that is locally pressure when subjected to shock.
- When the belt is applied to the abdomen, there you have it you that is strongly compressed when subjected to shock.
- If the belt is not applied firmly to the shoulder, there is a risk of being out-throw up before when subjected to a shock.

Handling and care of the seat belt

Handling

In the case of passenger type vehicles, Itoki is a place the person in the rear seat, please take the seat belt (1) and other packaging plate (2) to the base Rutogaido (3) as shown in the following figure.

74P30790

- The rear seat of the above diagram is a typical example. It depends on the car of the type.

- Fray and abrasions to the seat belt, when there is a Switching Operation scratch, please replace the belt.
- When the buckle does not work properly, please have it inspected by Suzuki service factory.
- When a strong force in the belt is applied in collision, even if there is no abnormality on the surface, may function is impaired. Please replace the belt.
- Or contains foreign matter to the inside of the buckle, when he or spilled drinks only matter, because there is a possibility that the seat belt does not exert the function correctly, please have it inspected in Suzukisa screw factory.
- Do not pinch the belt to the door. Before closing the door, please make sure if they were unwound without belt backlash Rumi.
- Do not alter the belt, please do not remove.

Care

The method of cleaning, be the same as that of such fabric.

→ 6-5 page (fabric, vinyl leather,
Care, such as resin parts)

Bleaching agents, solvents, do not use the dye. Stains, discoloration, next to the cause of the reduction in strength, seat belt There is a risk that does not exert the function normally.

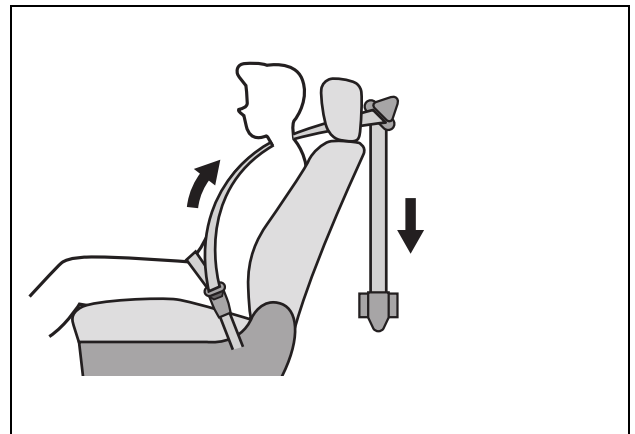

Seat belt pre-tensioners (Front seat only)

By equipment type

Seatbelt pre-tensioning donor and is

When the engine switch is in, a **ON** become the following situations, it takes up the shoulder belt in an instant.

- -Out door received a strong shock from the car forward.
This is linked with the driver and front passenger SRS Eabaggushi stem.
→ 3-45 page
(Operation of the SRS air bag system)

80J1018

アドバイス (Advice)

Actuated pre-tensioners and the airbag can not be re-used. Please replace Suzuki service factory.

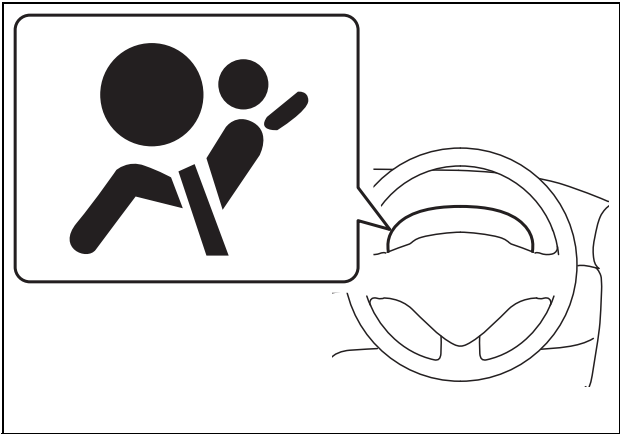

In order to function properly

Do not defeat the parts that affect the function of the seat belt pre-tensioners. Or it is wound into a tree and the seat belt is not stunning, it may be or are no longer taken up properly when needed.

→ 2-35 page (mounting of components, taken
Disconnect, when the repair)

Light switch

Turning on and off of the light

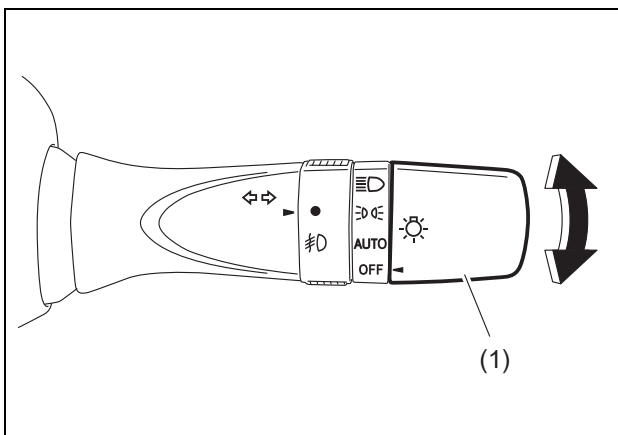

It can be used regardless of the position of the engine switch, and turned on and off Turn the light switch knob (1) in the following manner.

Auto-light system-equipped vehicles

74P30560

Auto-light system vehicles

74P30880

Position of the light switch	Headlight (headlight)	Car width lamp, tail light, Number lights, instrument lighting
	turn on	
	turn off	Lighting
AUTO	Automatic turning on and off (※)	
OFF	Extinction	

※ auto-light system (data Type Another equipment)

It will operate only when the engine switch is in.

注 記

While the engine is stopped, Please Do not such a long period of time is turned on. Cause of lead battery up.

■ Auto-light system

By equipment type

Can be used when the engine switch is ON, headlight and car width lamp is automatically according to the brightness of the outside of the vehicle Lighting - turns off.

Engines A down switch | ACC | Or
LOCK If it (OFF), and automatically turns off.

- Turning the knob on the light switch to the position of AUTO, and then turned on and off in the following manner.

The brightness of the outside of the vehicle	Headlight (headlight)	Car width lamp, tail light, number lights, instrument lighting
Bright when	Extinction	
Off when dim		Lighting
When it is dark	Lighting	

注 記

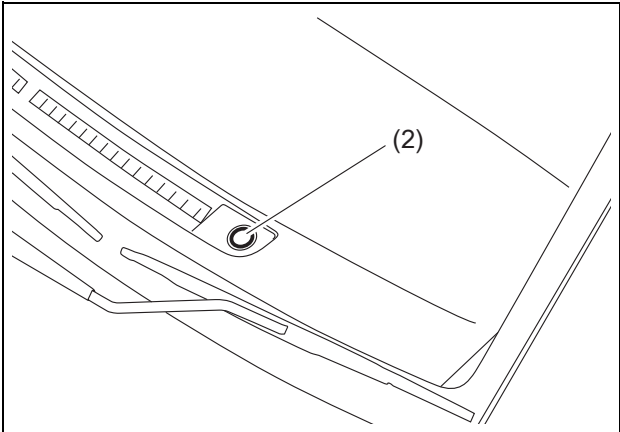

AUTO The left engine switch of position If a manner that, **ON** if not bought or engine, and the outside of the vehicle becomes dark both light and side lamps will light up. And as it is a long time to turn on, please keep in mind that it becomes the cause of the lead battery up.

3

アドバイス

Or place objects on top and ambient of the auto light sensor (2), please do not leave blew such as glass cleaner. Defeated the sensitivity of the sensor is low, it will no longer lights on and off correctly.

Instrument panel passenger side

74P30890

Light forgetting to turn off the warning buzzer

In order to prevent forgetting to turn off the headlights and side lamps, opened the driver's door when such as the following, indoor buzzer will sound continuously with the "Pi".

Keyless push start system-equipped vehicles

Even after you remove the key, lights and car width lamp is lit

Keyless push start system vehicles

The engine switch **LOCK** To (OFF)
Even after that, lights and car width lamp is lit

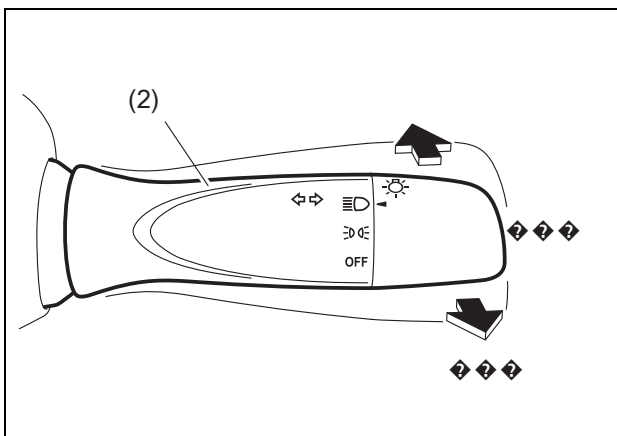

And turn off the lights and car width lighting, interior buzzer will stop.

Light of the upward, downward switching it

When you switch the headlights to the upward (high beam), you can illuminate far.

- When the light is on, it will be up and press the lever (2) the car forward. Returning to the original position, it will be under direction.
- Regardless of the position of the light switch, and pull the lever to the front, while pulling, upward light is on.
- When you up the light, head light upward (high beam) indicator light in the meter lights.

→ 3-82 page (headlight upward (high beam) indicator)

- Switch of the above diagram is a typical example. It depends on the type of your car.

アドバイス

When there is an oncoming vehicle or the preceding vehicle, please down the light.

Fog lamp switch

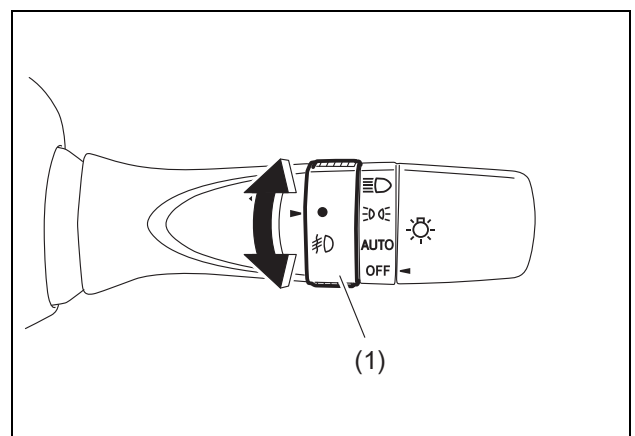

By equipment type

The headlights and side lamps are and can be used to come, and then use when there is poor visibility in rain or fog.

- If you Mawa the light switch of the ring (1) fog lights, fog lights indicator light in the meter lights.

→ 3-86 page

(Fog lamp lit indicator)

74P30900

注記

Because of the lead battery protection, please immediately turn off the switch When the visibility is getting better.

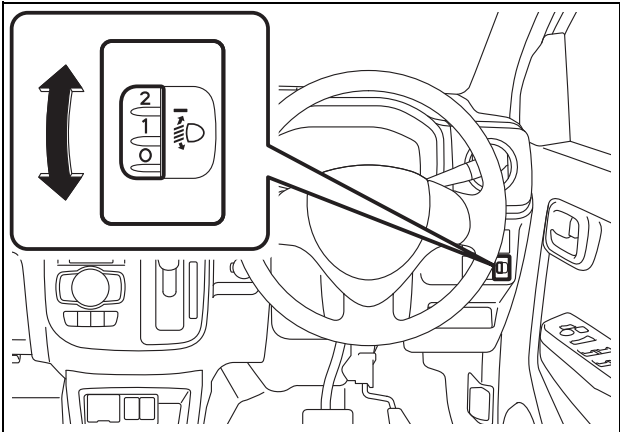

Optical axis adjustment dial

By equipment type

Halogen headlights vehicles, when turning the lights to the optical axis adjustment dial the light, you can adjust the light of the optical axis. And put the luggage and passenger light of the optical axis is at the top orientation, it will be the nuisance of the oncoming vehicle and the preceding vehicle. By operating the dial, please adjust the optical axis downward.

3

- Dial operation, please be carried out when the light is on downward (low beam). Light is steady upward (high beam), when or not lit, can not determine whether the optical axis is not properly adjusted.
- The scale of the dial 0 ~ Five Until there is, the optical axis is you can adjust in 11 steps (increments of 0.5).
- Increasing the scale of the dial, the optical axis will be downward.

74P30580

- Will change by luggage and passengers of how to put it, please adjust to the appropriate position in reference to the numerical value in the following table.

<Measure of the dial position>

Passenger type vehicles

conditions	Dial position
Take only the driver's seat	0
Take the driver's seat and the passenger seat	0.5
4 passengers	1 to 1.5
Luggage compartment packed with 4 passengers	1.5 to 2
Luggage compartment packed in riding only the driver's seat	2-2.5

Commercial type vehicles

conditions	Dial position
Take only the driver's seat	0
Luggage compartment packed in riding only the driver's seat	2-2.5

警告

Do running is not a dial operation. Operation to be distracted, it can lead therefore it unexpected.

注意

When adjusting the optical axis of the base in such inspection, be sure to dial to the position of 0. When 0 at a position other than that to adjust the basic optical axis, such as a light of the optical axis faces upward from the reference and might serve as safety issues.

アドバイス

- When you operate the dial, the optical axis of the downward-out of light (low beam) and upward (Haibi-time) will be adjusted at the same time.
- In the case of discharge headlights vehicles, the optical axis is automatically adjusted.
→ 3-75 page
(Auto-leveling warning light)

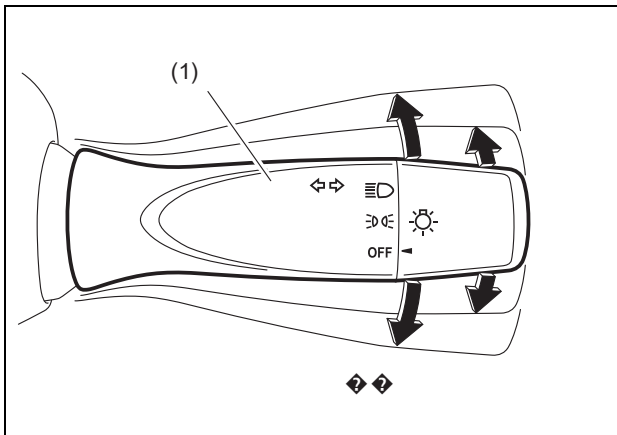

Direction indicator switch

Engine switch You can use when.

When the right turn, left turn

Turn left at the time: you push the lever (1). Turn right at the time: Press down on the lever.

- Turn signal indicator on the direction indicator and the meter will blink at the same time.
- And return the handle to the original, the lever is returned to automatically, and the indicator light direction indicator is turned off.

- Switch of the above diagram is a typical example. It depends on the type of your car.

アドバイス

If the angle to cut the handle is small, it may lever does not return automatically. Please return the lever by hand.

When the lane change

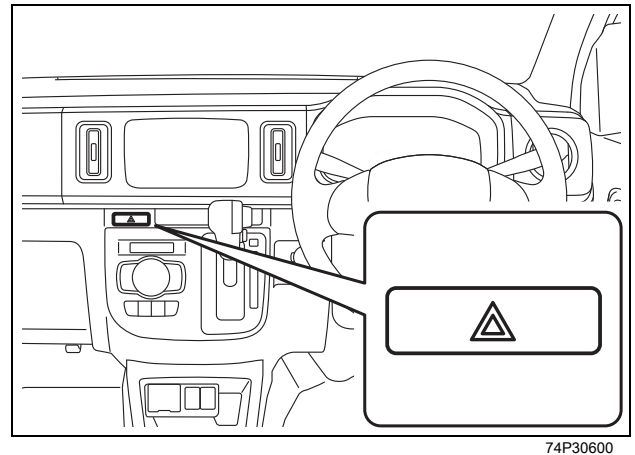

Press and hold lightly the lever in the direction of trying to change lanes.

- Only while pressing, turn signals and table 示灯 flash es.

Emergency flashing light switch

It can be used regardless of the position of the engine switch. Forced to use in an emergency or when the street parked car, such as failure.

- When you press the switch, turn signal indicator light of all of the direction indicator and the meter will blink.
- And it goes off when pressed again.

注記

Please do not blink for a long time while the engine is stopped. It will be the cause of the lead battery up.

Wiper / washer switch

Engine switch You can use when.

注意

Cold at the time of, washer fluid was sprayed on the glass surface is frozen, visibility might be evil Kunar. From warming the glass surface with a de Furosuta, please inject the watchdog Shah solution.

→ 5-2 page (defroster)

注記

- When the window is dry, please move the wiper from wet the cormorant indole in the washer fluid. When you empty the weapon there is a risk of scratching the glass surface and Waipabu blade (rubber portion).
- When the wiper blade is in the glass has had Ritsu, please do not operate the wiper. Or damaged blade portion (part of the rubber) is, there is a possibility that the wiper or malfunction.
- When the washer fluid does not come out sufficiently, please turn off the washer switch. It will cause the washer pump to malfunction.

■ When the wiper is stopped in operation

When the temperature of the wiper motor followed by a large load is that written state to the wiper such as snow goes up, the wiper will stop breaker is activated to protect the wiper motor. Be sure to deal with the following procedure.

- 1

Safe place Stop to Car, and en gin The switch

ACC

 Or

LOCK

Turn (OFF).
- 2

And the wiper switch to OFF.
- 3

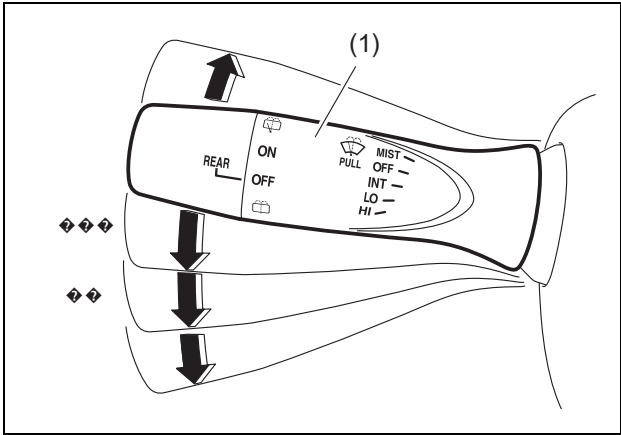

Remove the hamper snow of any obstacle the operation of the wiper.
- Four

After a while the temperature of the wiper motor is reduced, the breaker is attributed automatic recovery will enable use of the wiper.

 - If the wiper can not be used even wait for a while, other reasons may apply. Please have it inspected by Suzuki service factory.

(Hill Hold Control)

Traveling

■ Normal running

When you start to put in the select lever, by stepping write only the amount of the traveling speed and the accelerator pedal, you can run automatically shifting.

⚠️ 注意

Other than an emergency, please do not put in the select lever while driving. D down gin because the brake is not effective at all, it may cause an unexpected accident.

■ Rapid acceleration traveling

If you want to, such as overtaking is depressing to fill the accelerator pedal. Powerful acceleration and kick down is to give Rarema.

■ uphill traveling

When you are traveling out of the uphill, and we crowded look Stepping on the accelerator pedal in order to keep the scan speeds, there is the rotation of the engine to kick down increases suddenly.

- Depending on the slope of the hill, when the pre-S keep the ON the (sports) mode switch, you can powerfully smooth running is little change of the engine rotation.

■ downhill running

When traveling remains of the downhill, it may speed is weak effectiveness of the engine brake is too out.

- Depending on the slope of the hill, and a combination of engine brake in advance S the (sports) mode switch to ON.
- In steep downhill, put in when a powerful engine brake required.

⚠️ 警告

In the steep downhill or a long downhill, please combination of engine brake. If you continue down the brake pedal in the downhill, the brake system to overheat there is a possibility that the brake is not whether the effect.

Move the selector lever the way

- You can choose either of the (drive) mode, or M (manual) mode.

64P40210

	Stepping on the brake pedal, and move the selector lever while holding down the button.
	Move the selector lever without pressing the button.
	Press and hold the button and move the selector lever.
	Automatically returns to its original position and the release to the hand from the select lever.

- When you operate the select lever, please check the display. Note the inside meter (selector lever position display or the gear position display).
- Engine switch **ON** But, if the engine is in the stop state, because the selector lever is not switched, the selector lever position display in the meter, but is still of N, but this is not a malfunction.

- When the following operations to let you know in the display and warning buzzer in the meter.

- Depress the select lever, brake **N**

pedal The depressed The Meide engine switcher switch

START If you, brake

Request indicator lights, sounds a warning buzzer. Stepping on the brake pedal, please repeat the operation of the engine switcher switch.

- Select lever or more than **P** **N**

When outside, the brake pedal Do not step on

When the engine switch, the brake pedal request indicator lights, the display (select lever position display or the gear position display) in the meter **flashes, warning buzzer Over Sounds Or It is. And** the select lever or, by stepping on the brake pedal, please repeat the operation of the engine switcher switch. **N**

- Vehicle, such as when to repeat the forward and backward

In a state that is moving, Burekipeda

Le The select lever not step on the

N Or from **N** operation Then, **N** requests indicator in the meter lights, flashing Sele

Kutoreba position displayed in the N, will sound a warning buzzer. From completely stop stepping on Burekipe Dar, please repeat the operation of the select lever.

- When you operate the select lever, Se

Indication of the position and within meters of Rekutoreba (selector lever position display or the gear position display) is different if, flashing selector lever position display or gear position display, sounds a warning buzzer. When the little (2 to 3 seconds) waiting for the selector lever position display or the gear position display is not switched even as it is, by stepping on the brake pedal, please repeat the operation of the select lever.

⚠ 注意

- Were allowed to completely stop, please put the select lever **DOWN**. When the car is **moving**, it will cause the transformer mission fails.
- When the transmission warning light is lit, immediately stop the operation, sure to receive the inspection nest Suzuki service factory. When the warning light is on, it may become as follows.

→ 3-78 page

(Transmission warning light)

- Shifting even by operating the select lever

Can not

- When the vehicle speed falls below 10 km / h, the own

It becomes N (neutral) in motion, select lever position display in the meter flashes N, warning buzzer sounds

- The engine is stopped when the vehicle is stopped

- Engine can not be started

📌 アドバイス

↑ ↓ Of operation, be sure to wear a habit you do not press the button on the selector lever. Always

When you press the button is operating, wrong

PR It will put to

There is a fear.

■ The shift lock system

Such as when to start, is a system to prevent the erroneous operation of the select lever.

- Engine switch **ON** In brake
Only when you are stepping on the pedal, it can be moved to another **position** from the selector Trevor.
- **Engines** Down switch **ACC** Or **LOCK** When the (OFF), even if stepped on Burekiye Dar, can not move to another position from the **select** lever.
- Do we press the button of the select lever, Do not step on the brake pedal. You might see a shift lock is not released.
- Should the engine switch **ON** West
Te, if you do not move from the selector Trevor also stepping on the **brake** pedal to another position, the **next " How to cancel the shift lock "Please read the,** please release the shift Torokku. In this case, any failure of the shift lock system will be considered. Tadachinisuzuki service factory in Sai that we have it inspected.

⚠ 警告

Or spilled and drink to the select lever moving parts, if it is or contains foreign matter to the inside, because there is as it is a risk that if continue to use shift-lock system may not function properly, promptly checked by Suzuki service factory please received by.

⚠ 注意

When you start, please operate the select lever remains stepped firmly on the brake pedal.

■ How to release the shift lock

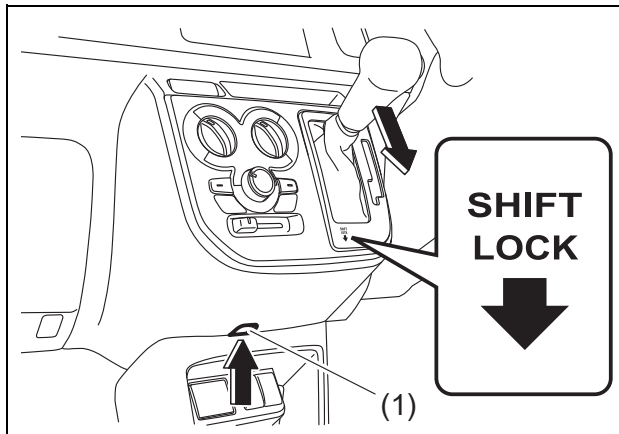

Of the shift lock system failure or lead battery

Li Over the uplink and the like, a select lever

P When from not be moved to another position, you can release the shift lock in the following procedure.

1 **ACC** For, the engine switch
To firmly put the parking brake, and then to state that stepped on the brake pedal.

2 With a finger from the hole at the bottom of the selector lever, while holding down the shift lock release button (1), to operate the select lever.

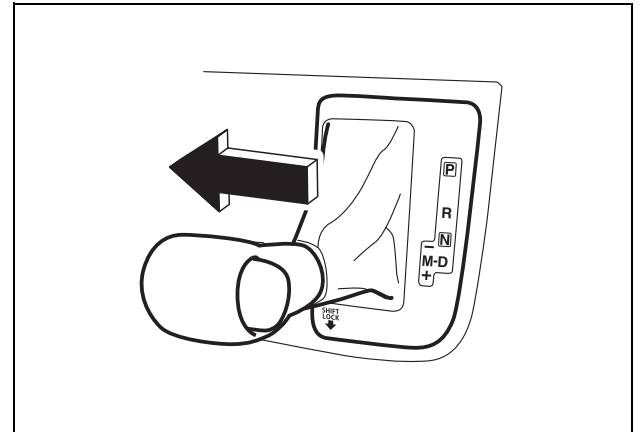

- The above figure is a typical example. It varies based on type of car.

Use of manual mode type

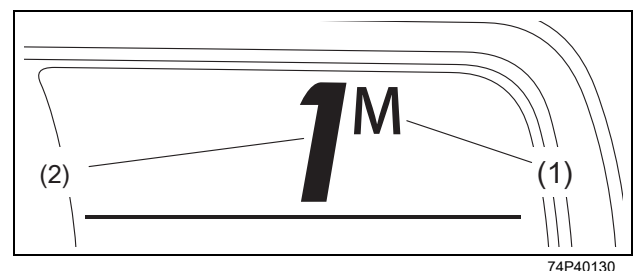

Drive mode will automatically shift, but if you in manual mode (manual shift mode), allows you to shift to any.

Manual mode **Over** When the soil is however dynamic the select lever from to.

D **M**

- With manual mode display (1) is displayed on the meter, the current **Giyapo Jishon** (2) **Table Shows Will To**.
- Gear position immediately after the move the select lever to Kara, is automatically **Giyapo Jishon** that has been selected at the time of the.

(1) Manual mode display (2) gear position display

- Even without moving to the select lever, and pull the remains **Padorushifutosu** match while traveling in front, temporarily you can to man mode.

→ 4-34 page (temporarily Manual When you Rumodo is)

■ Shift operation in the manual mode

In accordance with the gear position to the running speed can be selected from the first speed to the fifth speed gear.

- And even without the shift operation it decreases the vehicle speed, automatically shift down, stopping Then gear position 1 It will be.

- Accelerating on a slippery road surface, speed, brake please carefully done is. Ri like to sudden acceleration and engine brake, there is a lead to slip accident.

→ In 2-17 page (slippery road surface Run slowly)

- If you continue down the brake pedal in the long downhill, it carries the risk to be ineffective brake brake system to overheat.

→ 2-16 page (D in the long downhill Using the down gin brake)

- While driving, please do not pull the parking brake lever. Ready to multiplied by the sudden brake, there is a risk of accident.

- While driving Please do not put in the select lever. Since the engine brake does not work, unexpected accident original It will be the cause. Other than the select lever, if you've entered, please return to Sumiya crab. Gear in accordance with the traveling speed will be selected.

- When the transmission warning light is lit, immediately stop the operation, sure to receive the inspection nest Suzuki service factory. When the warning light is on, it may become as follows.

→ 3-78 page

(Transmission warning light)

- Shifting even by operating the select lever

Can not

- When the vehicle speed falls below 10 km / h, the own

It becomes N (neutral) in motion, select lever position Display of the meter flashes N, warning buzzer sounds

- The engine is stopped when the vehicle is stopped

- Engine can not be started

アドバイス

- Select lever Manual mode, if so It does not automatically shift up will. While when the paddle shift switch, Der switch was temporarily manual Rumodo pulling it toward automates upshift when the engine is in a high rotation Or

It is. However, because of engine protection, you may want to automatically shift up even in the manual mode.

- Or too high engine speed, it may not be able to shift to or too low no longer.

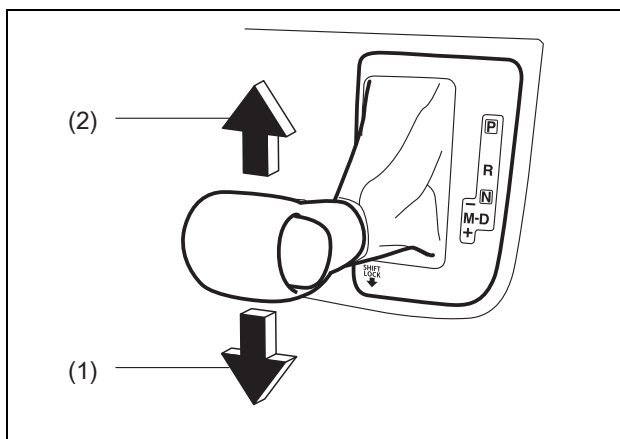

- There is a case where the engine speed is increased when shifting down, but, this is is due to perform a smooth gear shift, but this is not a malfunction.

- And Shifutodau down to the appropriate gear in downhill, please combination of engine brake. Engine brake takes effect low-speed gear moderately. However, there is a case where the shifting three or more stages time to shift is or hunt.

- When you shift, you might operation sound can be heard, but this is not a malfunction.

Use the select lever

- If you want to shift up, the select lever + Move to the side (downward) Or It is. When you release the hand, the lever will return to the position of automatically. M
- If you want to shift down, the select lever - Move to the side (upward) Or It is. When you release the hand, the lever will return to the position of automatically. M

74P40300

(1) + Side (shift-up) (2) - Side (shift down)

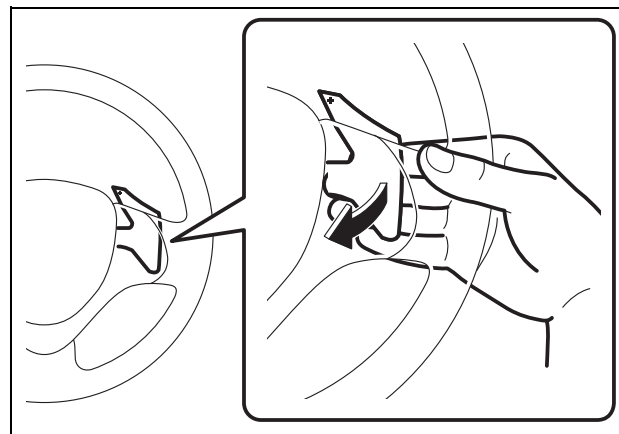

アドバイス

When you continuously want to shift, from the back to the position M of the select lever, please cycle the lever. The lever + Or - While keeping to the side, you can not shift continuously.

Using the paddle shift switch

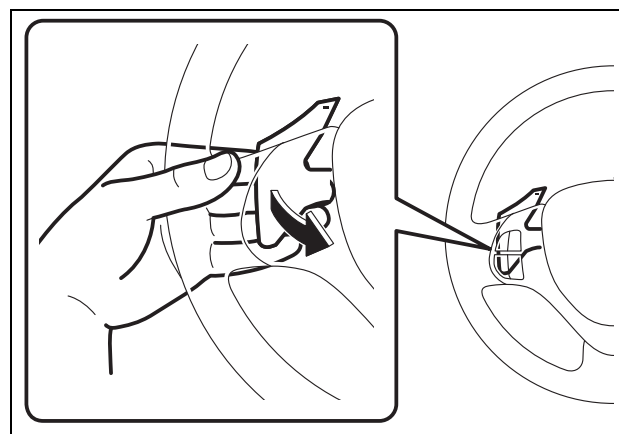

By equipment type

- If you want to shift up, the paddle shift switch on the right side of the handle (+ Pull the side) to the front. When you release the hand, the switch will automatically return to the original position.

74P40310

- If you want to shift down, the paddle shift switch on the left side of the handle (- Pull the side) to the front. When you release the hand, the switch will automatically return to the original position.

74P40320

アドバイス

- When you continuously want to shift from the hand is released from Padorushi shift switch, please again pull the switch. In the remains of the state which is obtained by subtracting the switch, you can not shift continuously.
- When you operate the left and right of the paddle shift switch at the same time, it may not be changed in speed.
